

Ordering a PCB from JLCPCB

Ordering a printed circuit board (PCB) from JLCPCB is one of the easiest things a person can do.

Step 1:

Go to [JLCPCB.com](https://jlcpcb.com)

Step 2 – Download the Gerber files

To place an order, you need to provide the **Gerber files** of the PCB.

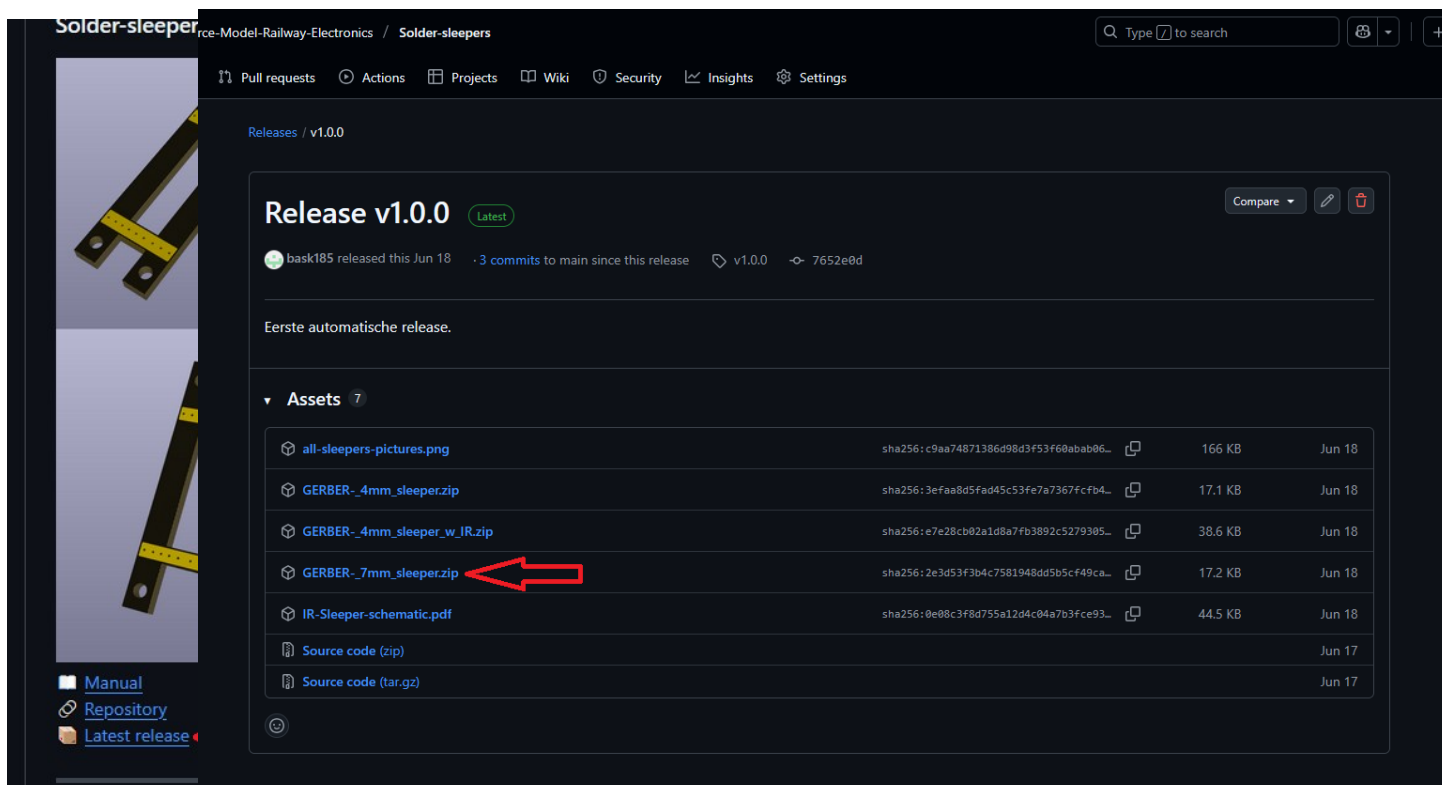

These files are already prepared for you — you don't have to create or modify anything yourself.

On the organization's front page, click on the **Releases** link of the project you want to order.

Inside that release section, you will find several downloadable files.

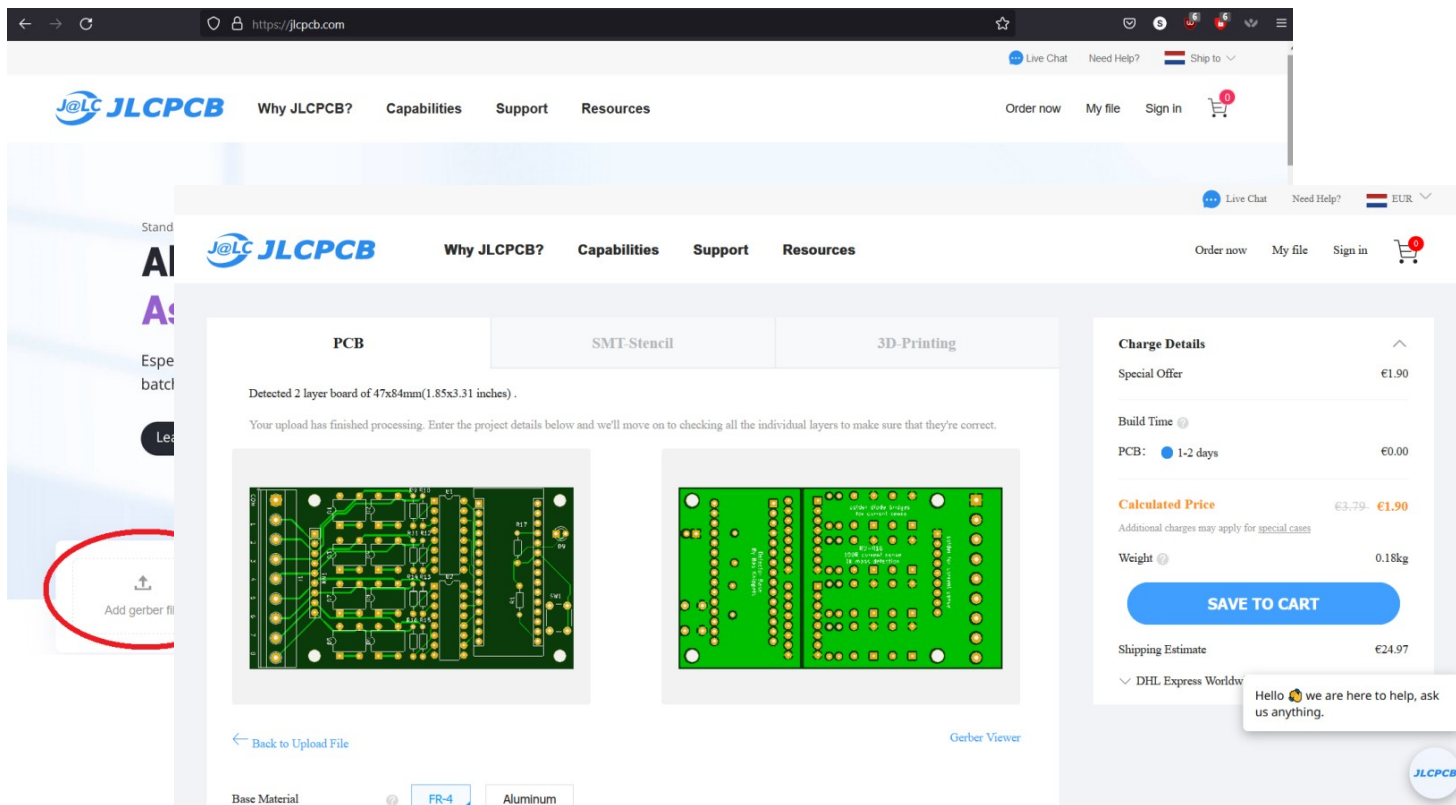

You have two options:

- Download the “**Source code (zip)**” file — it contains everything, including the Gerber files, documentation, and firmware.
- Or, if you only need the PCB data, click directly on the file named **GERBERS_XXXX.zip**.

Once you have downloaded the ZIP file, go to [JLCPCB.com](https://jlcpcb.com) click “**Add Gerber file**”, and select the ZIP you just downloaded.

It may take a few seconds to upload.

After uploading, the website will display a preview of your PCB.

If the board looks correct in the preview, everything is fine.

The first five PCBs you order cost about **\$2 in total**.

If you order more, the price per board becomes lower.

Step 3:

On the same page you can change several options such as board thickness, copper thickness, and material type.

By default, all settings are already suitable for hobby projects.

The only things you might want to change are the **quantity** and the **color** of the boards.

And sometimes you also want to adjust the board thickness. Default thickness is 1.6mm, but sometimes you want thinner board

(led strips and sometimes you want thicker boards (solder sleepers)).

Hello 👋 we are here to help, ask us anything.

Every change you make immediately updates the displayed price and the 3D preview.

Step 4:

When you are satisfied with the settings, click **“Save to cart.”**

You will need a free JLCPCB account — it’s useful because they keep your files, so you can reorder the same PCB later without uploading again.

From your cart you can add more designs or go directly to checkout.

The screenshot shows the JLCPCB shopping cart and summary page. The cart contains one item: 'detectorBase_P2' (Small-batch PCB:P2-3539887A, Purple, 1.6 thickness, HASL(with lead) 5-6 days) with a quantity of 100 and a price of €26.54. The summary on the right shows a subtotal of €26.54, a weight of 1.42kg, and a 'Secure Checkout' button. There is also an 'Add new item' button.

Step 5:

At checkout, choose your shipping method, enter your address once, and proceed to payment. You can pay by credit card or PayPal.

Delivery normally takes about **1–3 weeks** depending on the chosen carrier.

2.Shipping Method

DDP (Duty and customs fees handled by JLCPCB.)

☐ DHL Express Priority (DDP) 3-5 business days
This channel is highly recommended for customs Taxes & Duties can be pre-paid without disbursement fee. If company users need the tax receipt, please apply for it at the customer center after placing an order.

☐ EuroPacket 10-15 business days

IOSS (VAT collected at sales point, customs fee paid by JLCPCB, [learn more](#))

☐ DHL Express Worldwide 3-5 business days
☐ Use My DHL Account

☐ DHL Express Economy 4-6 business days
The logistics information will be updated two days later after you get AWB number.

☐ UPS Express Saver 5-7 business days

☐ FedEx International Priority 6-8 business days

☒ Standard Global Direct Line 12-18 business days
